

#WTL Practical Oral

① Assignment no. 1

- i) Browser & OS Support / Cache Support
- ii) Display Resolution
- iii) Website Design

Evaluation format

URL Purpose Things liked Things disliked Good / Bad

② Assignment no. 2

Tells how to display the page

<a> anchor tag - create link to another account

Text

target = _blank (where to open)

named anchor - work as label

<table> - table

<tr> - table row

<td> - cells </td>

<caption>

<th>

① unordered - with bullets

② ordered - marked with no

 /

Image as link

CSS - makes web page presentable

① <link rel="stylesheet" href="style.css">

h1 { color: navy;

} ① Load servlet class ② create instance into JVM

② <style>

</style>

<p style="color:red;">

③ Assignment no. 3

XML - Extensible Markup lang

used to store & organize data

① XML Schema Definition

Describes structure of XML document

<?xml version="1.0"?>

<xss element name="note">

<xss:complexType>

<xss:sequence>

<xss:element name="to">

type="ss:string"/>

④ Assignment no. 4
client-side scripting can make webpage more interactive
Cannot run on its own
Validation - ensure the ip correct
server side validation
client-side validation
getElementById(id="demo")

innerHTML - get content of element

document.getElementById("demo").

innerHTML="Hello";

<form action="/page.php" onsubmit="return validateForm()"

var x=document.forms["myForm"]
value

alert("Warning");

confirm("confirm") (true/false)

per=prompt("Enter name","default");

⑤ Assignment no. 5

Servlet - JSP & EJB are server side components
java prog lang used to create web apps

central apps hosted by web servers

Servlets are connected by DB

① Tomcat, Weblogic - Servlet API

javax.servlet, http

Runs at server create dynamic web

Acts as controller

① Load servlet class ② create instance init(), service(),

public void init() throws ServletException {

} destroy()

② DTD - Document type definition
used to verify data is valid

<!DOCTYPE note [

<!ELEMENT note (to, from, heading)>

<!ELEMENT to (HPCDATA)>

<!ELEMENT from (HPCDATA)>

<note>

<to> Love </to>

<from> Jani </from>

</note>

used to send req to component

public void destroy()

Service (Servlet request req,

ServletResponse req)

Row Record with multiple fields
Relates info of table with other

Invokes doGet/Post/put/Delete/
Trace/getlist/modifire()

MySQL is client/server where
server contains databases,
client prog connect to db server

Assignment no: 6

JSP - creates web app; extension to
Servlet HTML + JSP tags

Translation of JSP, compilation of JSP
load class file, instantiation

jspInit(), -jspService(), jspDestroy()

paste folder in web-apps in tomcat

index.jsp <http://localhost:8888/myapp/index.jsp>

```
<%out.print(2 * 5);%>
```

lib
classes
web.xml

Root - web-app

Scriptlet tag `<%out.print("Hello");%>`
Java code

Expression tag `<%= "Welcome" %>`

Declaration tag

```
<%int data = 50;%>  
<%= "Value : " + data %>
```

return
}

Assignment no: 7

PHP: Hypertext Preprocessor, Server Side Scripting
Handling forms (php/php3)

Can be interpreted, no var declaration

```
<?php ?> include("myfile.inc")
```

var name - \$ case-sensitive

echo "The Value : \$a";

```
mysql_connect("localhost", "root", "pass");  
OR  
die(mysql_error()); mysql_error()
```

mysql_close();

Assignment no: 8

Struts - Java Web Apps / open source product

POJO - simple Java class

Supports Ajax - required file sent not all

Provides UI Tags, Data tags, control tags

Assignment no: 9

AngularJS - Javascript framework

Binds data to HTML with expression
library written in JS

script src="https://ajax.googleapis.com/

ng-app - defines application

<input type="text" ng-model="name">

<p ng-bind="name"></p></div>

c. control (→ App Data) if

starts when web page loads

ng-init="name='san'" [name]

ng-controller="myCtrl">

<script>

var a = angular.module('myApp', []);

a.controller('myCtrl', function(\$scope)

{}; </script>

Assignment no: 10

EJB - Enterprise Java Beans

component based architecture

component based Enterprise app

multitiered, distributed

#Types of EJB

Session Bean - particular user for
single session; session terminates

Entity Bean persistent data storage

Message Driven Bean

used with JMS

Java Messaging Service

Focus on Business logic
Annotations - attach additional info
in class (meta data)

callbacks

Timer Service @Timeout

@EJB @Resource

Interceptors @PreInvoke

Embeddable objects

POJO - Plain old Java object

embed map column names
with methods

@Embeddable
